

HTET AUNG HLYAN

AI & Data Engineer

ABOUT ME

Motivated Knowledge Engineering student from the University of Computer Studies, Yangon. Passionate about applying Machine Learning, Data Mining, and NLP techniques to solve real-world problems. Seeking opportunities to contribute academic research and project experience to innovative data-driven teams.

ACADEMIC PROJECTS

100th anniversary of the Myanmar Engineering Education

Smart City Hackathon

23rd Nov 2024

- Collaborated in a time-constrained environment to develop an innovative waste management solution in smart cities.
- Applied 3D Modeling to solve a specific challenge, resulting in AI sorting smart trash bin and Automated IoT Controlled Smart Container Bots .

Yangon University Science Fair 2026

AI-powered WorkSafe Smart Entry

5th Feb 2026

- Presented WOLFEYE Smart Entry to faculty and peers, demonstrating IoT components and Python.
- Engineered a solution to wearing the required protective gear before entering restricted zones, achieving an intelligent safety monitoring system that combines Face Recognition and Personal Protective Equipment (PPE) Detection using real-time video analysis.

University of Computer Studies,Yangon Project Show

CC shop,full-stack e-commerce web application

Sep 2024

- Architected a full-stack e-commerce web application using Java Servlets and MVC pattern, delivering a deployable WAR artifact built with Maven on Java 17.
- Implemented RESTful JSON data handling with Jackson Databind and org.json, integrating backend business logic with a responsive SCSS/CSS front-end interface.
- Presented cc-shop at the University Project Showcase, demonstrating a collaborative Java-based e-commerce system developed with a 4-person team across 105+ commits.

Burmese News Headline Generator

Natural Language Processing Project

22nd Feb 2026

- Developed an automated Burmese news headline generation system using BiLSTM, mT5, and mBART-50 models trained on over 15,000 Burmese news articles.
- Designed an end-to-end NLP pipeline including data preprocessing, tokenization, model fine-tuning, and performance evaluation using BLEU, ROUGE, and BERTScore metrics.
- Conducted comparative analysis of deep learning architectures, demonstrating superior headline generation quality from transformer-based models for low-resource Burmese language tasks.

EDUCATION

University of Computer Studies, Yangon

Bachelor of Computer Science
2022 - 2027

SKILLS

- Language & Framework
 - Python
 - SQL
 - Java
 - PHP
- ML & Data
 - Pandas
 - NumPy
 - Scikit-learn
 - TensorFlow
 - Data Mining
 - NLP
 - Data Visualization
- Tools
 - Git
 - GitHub
 - Maven
 - MySQL

LANGUAGE

- English
- Japanese(basic)
